Ebla Technologies LLC

Most Common Keywords Test

ⓘ There is likely no optimal keyword density (search engine algorithms have evolved beyond keyword density metrics as a significant ranking factor). It can be useful, however, to note which keywords appear most often on your page and if they reflect the intended topic of your page. More importantly, the keywords on your page should appear within natural sounding and grammatically correct copy.

→ development - 9 times
→ services - 7 times
→ solutions - 5 times
→ engineering - 4 times
→ marketing - 4 times

Keyword Usage

ⓘ Your most common keywords are not appearing in one or more of the meta-tags above. Your primary keywords should appear in your meta-tags to help identify the topic of your webpage to search engines.

✖ Keyword(s) not included in Title tag
✖ Keyword(s) not included in Meta-Description tag

HOW TO FIX KEYWORD USAGE

First of all, you must make sure that your page is using the title and meta-description tags.
Second, you must adjust these tags content in order to include some of the primary keywords displayed above.

Keywords Cloud	affordable analytics application awareness best business businesses campaigns choice click client clients close competition competitiveness contact content contribute costeffective custom customers dallas deliver delivering design designing development direct diversity dreams ebla ecommerce effective efficiency email enable endtoend engineering enterprise facebook forte high highest home implementation improve increase industry info@eblatech.com insights internet latest learn linkedin management marketing mission mmanaging models offer offering optimal organizational outperforming page performance portal portfolio prices prides processes productivity products profile profitability provider providing quality range reporting reshape returns robust sales/marketing/product/operation send services solution solutions strengthen systems technologies texas touch trends ui/ux value vision visit website

<h2> Headings Status	✔ Your page contains H2 headings. Their contents are listed below: → what we do → About us → PORTFOLIO

Robots.txt Test

Your site lacks a "robots.txt" file. This file can protect private content from appearing online, save bandwidth, and lower load time on your server. A missing "robots.txt" file also generates additional errors in your apache log whenever robots request one. Read more about the robots.txt file, and how to create one for your site.

HOW TO FIX ROBOTS.TXT TEST

In order to pass this test you must create and properly install a **robots.txt** file.
For this, you can use any program that produces a text file or you can use an online tool (Google Webmaster Tools has this feature).
Remember to use all lower case for the filename: **robots.txt**, not **ROBOTS.TXT**.
A simple **robots.txt** file looks like this:

```
User-agent: *
Disallow: /cgi-bin/
Disallow: /images/
Disallow: /pages/thankyou.html
```

This would block all search engine robots from visiting "cgi-bin" and "images" directories and the page "http://www.yoursite.com/pages/thankyou.html"

TIPS:

- You need a separate **Disallow** line for every URL prefix you want to exclude
- You may not have blank lines in a record because they are used to delimit multiple records
- Notice that before the **Disallow** command, you have the command: **User-agent:** *. The **User-agent:** part specifies which robot you want to block. Major known crawlers are: Googlebot (Google), Googlebot-Image (Google Image Search), Baiduspider (Baidu), Bingbot (Bing)
- One important thing to know if you are creating your own **robots.txt** file is that although the wildcard (*) is used in the **User-agent** line (meaning "any robot"), it is not allowed in the **Disallow** line.
- Regular expressions are not supported in either the **User-agent** or **Disallow** lines

Once you have your **robots.txt** file, you can upload it in the top-level directory of your web server. After that, make sure you set the permissions on the file so that visitors (like search engines) can read it.

Sitemap Test	Your site lacks a sitemap file. Sitemaps can help robots index your content more thoroughly and quickly. Read more on Google's guidelines for implementing the sitemap protocol.
	
	HOW TO FIX SITEMAP TEST
	In order to pass this test you must create a sitemap.xml file for your website. Some of the best practices are listed below:
	• It is strongly recommended that you place your sitemap at the root directory of your website: **http://yourwebsite.com/sitemap.xml** But in some situations, you may want to produce different sitemaps for different paths on your site (e.g., security permission issues)
	• Sitemaps should be no larger than 10MB (10,485,760 bytes) and can contain a maximum of 50,000 URLs. This means that if your site contains more than 50,000 URLs or your sitemap is bigger than 10MB, you must create multiple sitemap files and use a **Sitemap index file**
	• All URLs listed in the sitemap must reside on the same host as the sitemap. For instance, if the sitemap is located at **http://www.yourwebsite.com/sitemap.xml**, it can't include URLs from **http://subdomain.yourwebsite.com**
	• Once you have created your sitemap, let search engines know about it by submitting directly to them, pinging them, or adding the sitemap location to your **robots.txt** file
	• Sitemaps can be compressed using gzip, reducing bandwidth consumption
	sitemap.xml example:
	`<?xml version="1.0" encoding="UTF-8"?>`
	`<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">`
	`<url>`
	`<loc>http://www.yourwebsite.com</loc>`
	`<lastmod>2013-01-01</lastmod>`
	`<changefreq>weekly</changefreq>`
	`<priority>0.9</priority>`
	`</url>`
	`<url>`
	`<loc>http://www.yourwebsite.com/articles/100</loc>`
	`<changefreq>weekly</changefreq>`
	`</url>`
	`<url>`
	`<loc>http://www.yourwebsite.com/articles/101</loc>`
	`<lastmod>2013-01-02</lastmod>`
	`<changefreq>weekly</changefreq>`
	`</url>`
	`<url>`
	`<loc>http://www.yourwebsite.com/articles/102</loc>`
	`<lastmod>2013-01-02T13:00:12+00:00</lastmod>`
	`<priority>0.5</priority>`
	`</url>`
	`</urlset>`

Broken Links Test	Congratulations! We have checked 17 links on this web page and none of them are broken.
SEO Friendly URL Test	Congratulations! All links from your webpage are SEO friendly.

Image Alt Test	✔ Your webpage has **25** 'img' tags and all of them contain the required 'alt' attribute.
Inline CSS Test	✔ Congratulations! Your web page does not use inline CSS styles.
Deprecated HTML Tags	✔ Congratulations! Your page does not use HTML deprecated tags.

Google Analytics Test	✖ A Google Analytics script is not detected on this page. While there are several tools available to monitor your site's visitors and traffic sources, Google Analytics is a free, commonly recommended program to help diagnose potential SEO issues.
	
	HOW TO FIX GOOGLE ANALYTICS TEST
	In order to pass this test you must create an account on Google Analytics site and insert into your page a small javascript tracking code.
	Example:
	
	`<!-- Google Analytics -->`
	`<script>`
	`(function(i,s,o,g,r,a,m){i['GoogleAnalyticsObject']=r;i[r]=i[r]||function(){`
	`(i[r].q=i[r].q||[]).push(arguments)},i[r].l=1*new Date();a=s.createElement(o),`
	`m=s.getElementsByTagName(o)[0];a.async=1;a.src=g;m.parentNode.insertBefore(a,m)`
	`})(window,document,'script','//www.google-analytics.com/analytics.js','ga');`
	
	`ga('create', 'UA-XXXX-Y', 'auto');`
	`ga('send', 'pageview');`
	
	`</script>`
	`<!-- End Google Analytics -->`
	
	Note that you have to change the 'UA-XXXX-Y' with the proper id which you'll find in your analytics account.

Favicon Test	✔ Congratulations! Your website appears to have a favicon.
JS Error Checker	✔ Congratulations! There are no severe JavaScript errors on your web page.
Social Media Check	✔ Congratulations! Your website is connected successfully with social media using: Facebook;

SPEED OPTIMIZATIONS

HTML Page Size Test	✔ Congratulations! The size of your web page's HTML is 4.54 Kb and is under the average web page's HTML size of 33 Kb. Faster loading websites result in a better user experience, higher conversion rates, and generally better search engine rankings.
HTML Compression/GZIP Test	✔ Congratulations! Your page is successfully compressed using **gzip compression** on your code. Your HTML is compressed from **20.35 Kb** to **4.54 Kb** (**78 % size savings**). This helps ensure a faster loading web page and improved user experience.

Site Loading Speed Test	✔ Your site loading time is around **2.38 seconds** and this is under the average loading speed which is **5 seconds**.
Page Objects	✖ Your page has more than 20 http requests, which can slow down page loading. You can try reducing http requests through various methods such as using text instead of images, using css sprites, using data URIs instead of images, or combining several external files together into one. HTML Pages: 2; CSS Files: 10; Scripts: 7; Images: 27; Flash Files: 0;
Page Cache Test (Server Side Caching)	✖ It does not appear that you are caching your pages. Cached pages serve up static html and avoid potentially time consuming queries to your database. It also helps lower server load by up to 80%. Caching most visibly benefits high traffic pages that access a database, but whose content does not change on every page view. Common caching methods include Alternative PHP Cache, Quickcache, and WP Super Cache (for Wordpress sites). Caching mechanisms also typically compress HTML, further reducing page size and load time. **HOW TO FIX PAGE CACHE TEST (SERVER SIDE CACHING)** In order to pass this test you are advised to use a caching mechanism for your pages. There are three methods which can be used to caching your web pages: 1. **Alternative PHP caching** - Alternative PHP Cache (APC) is an open source framework which caches data using intermediate PHP code. Most web programmers who are familiar with the PHP programming language can easily set up Alternative PHP Cache for your site. 2. **Quickcache** - Quickcache is a lightweight page caching solution which was formerly known as jpcache. Quickcache caches the page output rather than compiling the PHP page, making it a superior version of page caching to the Alternative PHP caching. Quickcache can be quickly downloaded from their website and can reduce your page load time up to 80%. 3. **WP Super Cache** - If you have a Wordpress website, WP Super Cache can be installed within seconds and without no programming knowledge.
Flash Test	✔ Congratulations! Your website does not include flash objects (an outdated technology that was sometimes used to deliver rich multimedia content). Flash content does not work well on mobile devices, and is difficult for crawlers to interpret.
Image Expires Tag Test	✔ Congratulations! Your webpage use 'Expires' header for your images and the browsers will display these images from the cache.
JS Minification Test	! Some of your website's JavaScript files are not minified! → http://ebla-tech.com/js/jquery.main.js → http://ebla-tech.com/js/mas.js **HOW TO FIX JS MINIFICATION TEST** In order to pass this test you must minify all of your external JavaScript files. For this task you can use an online JS minifier like YUI Compressor, Closure Compiler or JSMin.

CSS Minification Test	Some of your website's CSS files are not minified! → https://fonts.googleapis.com/css?family= ... reat+Vibes%7CPoppins:400,300,500,600,700 → http://ebla-tech.com/css/bootstrap.css → http://ebla-tech.com/css/font-awesome.min.css → http://ebla-tech.com/css/page-assets.css → http://ebla-tech.com/css/helper-elements.css → http://ebla-tech.com/style.css → http://ebla-tech.com/css/color/color.css → http://ebla-tech.com/css/animate.css → https://fonts.googleapis.com/css?family=Roboto:400,500 **HOW TO FIX CSS MINIFICATION TEST** In order to pass this test you must minify all of your external CSS files. For this task you can use an online CSS minifier like YUI Compressor or cssmin.js.
Nested Tables Test	Congratulations, your page does not use nested tables. This speeds up page loading time and optimizes the user experience.
Frameset Test	Congratulations! Your webpage does not use frames.
Doctype Test	Congratulations! Your website has a doctype declaration: → <!DOCTYPE html>
URL Redirects Checker	Congratulations! Your URL doesn't have any redirects (which could potentially cause site indexation issues and site loading delays).

SERVER AND SECURITY

URL Canonicalization Test	http://ebla-tech.com and http://www.ebla-tech.com resolve to the same URL.
HTTPS Test	Your website is not using https, a secure communication protocol. Even for sites that do not collect sensitive customer information, search engines suggest that switching to https is an increasingly good idea and may help improve rankings. Note: if your site relies primarily on adsense income, be aware that using https may be detrimental to ad earnings. **HOW TO FIX HTTPS TEST** If your website needs a secured authentication or an encrypted transfer of data, you need to install an SSL certificate in order to provide a secure connection over HTTPS protocol. HERE is a "step by step" guide to purchase and install an SSL certificate.
Safe Browsing Test	This site is not currently listed as suspicious (no malware or phishing activity found).
Server Signature Test	Congratulations, your server signature is off.

Directory Browsing Test	✔ Congratulations! Your server has disabled directory browsing.
Plaintext Emails Test	✖ We found 1 email addresses in your page code. We advise you to protect email links in a way that hides them from the spam harvesters. **HOW TO FIX PLAINTEXT EMAILS TEST** In order to pass this test you must make your email addresses invisible to email spiders. Note that the best option is to replace your entire contact mechanism with a contact form and using the POST method while submitting the form. Other solutions are listed below: • replace the at (@) and dot (.) characters • replace text with images • use email obfuscators • hide email addresses using JavaScript or CSS trick

MOBILE USABILITY

Media Query Responsive Test	✔ Congratulations, your website uses media query technique, which is the base for responsive design functionalities.
Mobile Snapshot	

ADVANCED SEO

Microdata Schema Test	✖ Your webpage doesn't take the advantages of HTML Microdata specifications in order to markup structured data. View Google's guide for getting started with microdata.
	
	HOW TO FIX MICRODATA SCHEMA TEST
	HTML5 Microdata is an easy way to add semantic markup to your web pages. Search engines rely on this markup to improve the display of search results, making it easier for people to find the right web pages.
	Here is a simple example of how to use HTML5 microdata in your contact web page:
	
	`<div itemscope itemtype="http://schema.org/Person">`
	`  <span itemprop="name">Joe Doe</span>`
	`  <span itemprop="company">The Example Company</span>`
	`  <span itemprop="tel">604-555-1234</span>`
	`  <a itemprop="email" href="mailto:joe.doe@example.com">joe.doe@example.com</a>`
	`</div>`

Noindex Checker	✔ Your webpage does not use the noindex meta tag. This means that your webpage will be read and indexed by search engines.
Canonical Tag Checker	✔ Your page does not use the canonical link tag.
Nofollow Checker	✔ Your webpage does not use the nofollow meta tag. This means that search engines will crawl all links from your webpage.
Disallow Directive Checker	✔ Your site lacks a "robots.txt" file. This file can protect private content from appearing online, save bandwidth, and lower load on your server. A missing "robots.txt" file also generates additional errors in your apache log whenever robots request one.
SPF records checker	✔ Congratulations! Your DNS server is using an SPF record. This SPF record is listed below: → v=spf1 ip4:181.214.31.155 +a +mx +ip4:205.234.200.236 ~all
