TASKS

1-Fix websites errors: the original website has lost dependencies so it wasn't able to work, we install dependencies again
2-Remove short-tag: short tag is PHP notation that used in past and it is not supported by cpanel or pleask, we resolve all short tags
3-Upgrade website: the original website was developed in PHP 5.0 and this version is no longer supported and obsolete, so it has a vulnerability and security issues, we upgrade the code to be able to work under version 7.0 and above (8.0) and this enhanced security and performance.
4-283 files was updated
